## STRUCTURE

The main frame carrier parts are 2.2 cm beech plywood. Supporting pillars are 1.4 cm poplar plywood. The bottom is supported with 1.8 cm beech plywood. The seating is reinforced with a 3 mm thick felt pad. Springs have a decisive influence on the comfort of sitting and that's why Caridia utilizes 3.8 mm thick steel Zig Zag springs in order to offer customers a comfortable feeling. The main parts of the frame such as front panel, outside back, and outside arms are coated with 28 DNS foam and wrapped with 250 g/m<sup>2</sup> fiberfill. HILDA offers 11 different setup variations with the help of different modules. Each module can be easily and securely fastened together with the help of the provided alligator clips.

## SEATING COMFORT

The seating and back cushions are removable and designed as High Resilient (HR) foam. The back cushions are filled with a special blend of goose feather, ball fiber, and foam flakes. Caridia aims balancing the rigidity and the comfortability of HILDA by employing a unique foam design in order to emphasize the quality sitting and perfect appearance. The sitting cushion is composed of three layers of foam at different density levels, 35 HR at the bottom, 25 HR in the middle, and 25 DNS memory foam on top of it, and finally coated with 250 g/m<sup>2</sup> fiberfill wrap.

## LEGS

The wooden frame leg with its 6 cm height is made of first quality kiln dried beechwood. Frame leg complements the elegance design, sitting ergonomics, and overall comfort.
